Art Unit: 2112

DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1, 2 and 6-9, drawn to a voice encoding unit for voice-encoding an incoming voice band signal; a packet generating unit for accepting the encoded voice signal from said voice encoding unit, and for assembling packets from the encoded voice signal and outputting them; a redundant packet generating unit for accepting the encoded voice signal from said voice encoding unit, and for assembling redundant packets to each of which error correction data is added and outputting the redundant packets.

Group II, claim(s) 3 and 5, drawn to a voice encoding unit for voice-encoding an incoming voice band signal; a packet generating unit for accepting the encoded voice signal from said voice encoding unit, and for assembling packets from the encoded voice signal and outputting them; two more redundant packet generating units each for accepting the encoded voice signal from said voice encoding unit, and for assembling redundant packets to each of which error correction data having a different degree of transmission-error-tolerance is added from the encoded voice signal and outputting them.

Group III, claim(s) 4, drawn to two or more voice encoding units each for performing voice encoding with a different coding rate on an incoming voice band signal; a packet generating unit for selectively accepting an encoded voice signal having a largest coding rate from the encoded voice signals obtained by said two or more voice encoding units, and for assembling packets from said selected, encoded voice signal and outputting the packets; two or more redundant packet generating units each for accepting the encoded voice signal from one of said two or more voice encoding units, and for assembling redundant packets to each of which error correction data having a different degree of transmission-error-tolerance is added from the encoded voice signal and outputting them.

Application/Control Number: 10/520,101

Art Unit: 2112

The inventions listed as Groups I to III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the inventions have different modes of operation Group I for encoding according to a single voice encoding unit and a single redundant packet generating unit; Group II for encoding according to a single voice encoding unit and two or more redundant packet generating units; and Group III for encoding according to two or more voice encoding units and two or more redundant packet generating units.

A telephone call was made to BIRCH STEWART KOLASCH & BIRCH on 01/03/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Application/Control Number: 10/520,101

Art Unit: 2112

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph D. Torres whose telephone number is (571) 272-3829. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jacques Louis-Jacques can be reached on (571) 272-6962. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
